The BSCG Certified Drug Free program provides assurance that dietary supplements, natural products, cosmetics, medical devices, or other products are free of banned substances and other drug contaminants that can lead to health concerns or positive drug tests. As part of the program, finished product batches are tested for drugs on the WADA Prohibited List and other banned substance lists in sport as well as prescription, over-the-counter, and illicit drugs not banned in sport. This Batch Certification verifies that samples of the product identified by brand name, product name, and batch number below have been tested at our ISO/IEC 17025 accredited laboratory partner by instrumental screen using liquid chromatography/mass spectrometry (LC/MS) and that no compounds were detected according to the details and method detection levels outlined in the BSCG banned substance testing menu on the following pages. The BSCG Certified Drug Free program offers the maximum protection to athletes and professionals across the spectrum of WADA, NFL, MLB, NHL, NBA, WNBA, PGA, LPGA, MLS, CFL, ATP, WTA, FIFA, FINA, AFL, NRL, NASCAR, UFC, CrossFit, NCAA, military, first responder, and other workplace drug testing programs.

Notes and Method Detection Levels:

- The lists above include the majority of compounds in the standard BSCG banned substances testing menu, but they are not exhaustive lists. BSCG regularly adds additional compounds that may not be listed here. BSCG reserves the right to make any additions, subtractions or adjustments to these lists that it deems appropriate for any reason at any time.
- The World Anti-Doping Agency (WADA) Category column is used to sort compounds banned in sport according to how they are organized on the WADA Prohibited List. The WADA Prohibited List is considered by many in the anti-doping community as the most robust banned substance list in human sport and is used as a guide by most other sporting groups and leagues with some groups opting to either use the WADA Prohibited List as is, or a subset of the drugs included. The compounds included are banned by most major sporting organizations including WADA, NFL, MLB, NHL, NBA, WNBA, PGA, LPGA, MLS, CFL, ATP, WTA, FIFA, FINA, AFL, NRL, NASCAR, UFC, CrossFit, NCAA, as well as military and first responder drug testing programs. Some organizations, such as NFL, MLB, and NCAA, may ban additional drugs not prohibited by WADA; those are included as relevant under the appropriate WADA category. Some compounds in the testing menu are not listed as prohibited substances but have resulted in adverse analytical findings or would be considered banned under related substance language included in certain compound categories.
- In addition to compounds banned in sport prescription, over-the-counter (OTC) or illicit drugs not banned in sport are also included in the testing menu. Compounds not banned in sport are organized alphabetically.
- BSCG has established Method Detection Levels which represent the amount, in parts per billion (ng/g), above which a compound can be identified in a representative dietary supplement matrix. Methods have been validated to ISO/IEC 17025 standards according to the fit for purpose principle of analytical chemistry with Method Detection Levels established in the 2-100 ng/g range for most compounds with the remaining compounds in the 100-500 ng/g range. Detection levels in unique items may be lower or higher than established Method Detection Levels for certain compounds due to matrix variation.
- Method Detection Levels were established using extractions tailored to groups of compounds based on their chemistry. Method Detection Levels are subject to the capabilities of the extraction used for the analysis. While each extraction is capable of detecting compounds for which it was not designed, the Method Detection Levels for some compounds have not been verified. Method Detection Levels for compounds with similar chemistry to those that have been validated is expected to be in the 2-500 ng/g range, but this performance is not guaranteed.
