BATCH CERTIFICATION

The BSCG Certified Drug Free program provides assurance that dietary supplements, natural products, cosmetics, medical devices, or other products are free of banned substances and other drug contaminants that can lead to health concerns or positive drug tests. Every finished product batch is tested for 450+ drugs on the WADA Prohibited List and other banned substance lists as well as prescription, over-the-counter, and illicit drugs not banned in sport. This Batch Certification verifies that the product identified by brand name, product name, and batch number below has been tested at our ISO/IEC 17025 accredited laboratory partner by instrumental screen using liquid chromatography/mass spectrometry (LC/MS) and/or gas chromatography/mass spectrometry (GC/MS) and that no compounds were detected according to the details and method detection levels outlined in the BSCG banned substance testing menu on the following pages. The BSCG Certified Drug Free program offers the maximum protection to athletes and professionals across the spectrum of WADA, NFL, MLB, NHL, NBA, WNBA, PGA, LPGA, MLS, CFL, ATP, WTA, FIFA, FINA, AFL, NRL, NASCAR, UFC, CrossFit, NCAA, military, first responder, and other workplace drug testing programs.

Notes and Method Detection Levels:

1. The BSCG banned substance testing menu covers more than 450 compounds. The lists above include the majority of compounds in the BSCG banned substance testing menu, but they are not exhaustive lists. Compounds are added regularly and additional compounds that are not listed here may be included in the testing. BSCG reserves the right to make any additions, subtractions or adjustments to these lists that it deems appropriate for any reason at any time.

2. The World Anti-Doping Agency (WADA) Category is used to sort compounds banned in sport according to how they are organized on the WADA Prohibited List. The WADA Prohibited List is used as a guide by most other sporting groups and leagues with some opting to either use the entire WADA Prohibited List, or a subset of it. The compounds included are banned by most major sporting organizations including WADA, NFL, MLB, NHL, NBA, WNBA, PGA, LPGA, MLS, CFL, ATP, WTA, FIFA, FINA, AFL, NRL, NASCAR, UFC, CrossFit, NCAA, as well as military and first responder drug testing programs. Organizations, such as NFL, MLB, and NCAA, may ban additional drugs not prohibited by WADA; those are included under the appropriate WADA category. Some compounds in the testing menu are not listed as prohibited substances but have resulted in adverse analytical findings or would be considered banned under related substance language included in certain compound categories.

3. In addition to compounds banned in sport prescription, over-the-counter (OTC) or illicit drugs not banned in sport are also included in the testing menu. Compounds not banned in sport are organized alphabetically.

4. MDL - Method Detection Levels represent the amount, in parts per billion (ng/g), above which a compound can be identified in a representative matrix but they are not guaranteed. Method detection levels in unique items may be lower or higher than expected Method Detection Levels for certain compounds due to matrix variation or interference.

5. Reporting Thresholds:

Higenamine – 5 ug/day, N-methylphenethylamine - 1 ug/day. Otherwise, any amount of a banned substance in sport will be reported if it meets acceptance criteria and a Batch may not be certified. Compounds not banned in sport have a reporting threshold of 10 ug/day based on product serving suggestions and/or 0.0005% and presence above these levels may result in a Batch not being certified.

Reporting levels are subject to BSCG review and BSCG retains the right to make any adjustments based on the circumstances surrounding each case at its sole discretion. Potential natural presence of a compound, pharmacodynamics, and/or other relevant factors may be considered when evaluating the significance of findings.
